SUMMARY

Final-year B.Tech (Computer Science, Data Science) student with hands-on experience in Python, SQL, Machine Learning, Artificial Intelligence, and Data Analytics. Solved 110+ problems on LeetCode. Seeking an internship or entry-level data science role to apply these skills on real-world projects.

EDUCATION

B.Tech Computer Science & Data Science

Galgotias College of Engineering & Technology

Expected Graduation: 2027

CGPA: 7.41 / 10

12th Grade (Senior Secondary)

RLS Convent Senior Secondary School

2021

90.1%

10th Grade (Secondary)

RLS Convent Senior Secondary School

2019

80.1%

SKILLS

Programming & Querying: Java, SQL

Machine Learning & AI: Machine Learning, Artificial Intelligence, Model Building, Prompt-based APIs (Groq, LLMs), Computer Vision, Face Recognition

Full Stack Development: HTML, CSS, JavaScript, Flask

Data Analysis & Statistics: Data Cleaning, Exploratory Data Analysis (EDA), Descriptive Statistics, Data Analytics, Insight Generation

Core Strengths: Analytical Thinking, Problem Solving (110+ LeetCode problems), Attention to Detail

INTERNSHIP

Web Development Intern

Sept 2025

CodSoft (Virtual Internship) | Project 1 | Project 2 | Project 3

Duration: 4 Weeks

- Completed a 4-week virtual internship, building 3 responsive web projects using HTML, CSS, and JavaScript.
- Designed and deployed all 3 projects live on Vercel, ensuring clean UI, proper layouts, and cross-device compatibility.
- Delivered every assigned task on time, maintaining consistent code quality across all 3 projects.

PROJECTS

AI Attendance System (Computer Vision + Voice Recognition) | GitHub | Live

2026

- Python, OpenCV, Face Recognition, Speech Recognition, Flask
- Developed an intelligent attendance management system using face recognition and voice recognition technologies.
- Integrated OpenCV for real-time face detection and recognition, combined with speech recognition for voice-based verification.
- Built a Flask backend with a database to log attendance records automatically, reducing manual entry time by 90%.
- Implemented robust error handling and validation to ensure accuracy and prevent spoofing attempts.

Homely Hub (Hotel & Resort Booking Website) | GitHub | Live

2026

- MongoDB, Express.js, React, Node.js (MERN Stack)
- Built a full-stack hotel and resort booking platform enabling customers to search, browse, and book rooms.
- Developed RESTful APIs with Express.js and Node.js to handle customer and hotel owner interactions on the backend.
- Designed a responsive React frontend and integrated it with a MongoDB database for persistent booking and listing data.
- Deployed the application live on Vercel, ensuring a smooth end-to-end booking experience.

AWARDS & CERTIFICATIONS

- Introduction to Machine Learning – NPTEL (IIT Madras), 2025:** Completed a 12-week certified course covering supervised and unsupervised learning concepts, with hands-on assignments and a proctored exam.
- Oracle Cloud Infrastructure – Generative AI Professional, 2025 (Oracle University)**
- AWS Essentials, 2025 (Udemy)**
- JavaScript for Beginners, 2025 (Udemy)**
- Infosys Springboard, 2024–2025:** Python Basics, Data Structures & Algorithms using Python (Part 1), Java Programming Fundamentals, Spring 5 Basics with Spring Boot, HTML – Advanced
